

Month	Year	Event
Aug	2019	Start of the season
Sep	2019	First round of the season
Oct	2019	Second round of the season
Nov	2019	Third round of the season
Dec	2019	Fourth round of the season
Jan	2020	Fifth round of the season
Feb	2020	Sixth round of the season
Mar	2020	Seventh round of the season
Apr	2020	Eighth round of the season
May	2020	Ninth round of the season

1. The first step in the process of creating a new product is to identify a market need. This involves conducting market research to determine what consumers want and what problems they are trying to solve. Once a need is identified, the next step is to develop a concept for a product that addresses that need. This often involves brainstorming and sketching ideas. The third step is to create a prototype, which is a preliminary model of the product. This can be done using various materials and techniques, depending on the nature of the product. The fourth step is to test the prototype, which involves showing it to a group of people and gathering their feedback. This feedback is used to make improvements to the product. The final step is to create a business plan, which outlines how the product will be marketed, sold, and distributed. This plan also includes financial projections and a timeline for development and launch.
